#### Step 1. Navigate to cloud.ibm.com

#### Step 2. Search on Container Registry and give get started and follow the steps to install IBM Cloud CLI

The screenshot shows the IBM Cloud Container Registry page. The browser's address bar displays 'cloud.ibm.com/registry/catalog'. The page header includes 'IBM Cloud' and a search bar. The main content area is titled 'Container Registry' and includes a 'Get started' button. The page is divided into sections: 'Summary', 'Features', and 'Pricing plans'. The 'Summary' section describes the service as a fully managed private registry for Docker container images. The 'Features' section lists three key features: 'Highly available and scalable private registry', 'Image security compliance with Vulnerability Advisor', and 'Quota limits for storage and pull traffic'. The 'Pricing plans' section is partially visible at the bottom.

### Summary

Manage Docker container images in a fully managed private registry. Push private images into this registry to run them in IBM Cloud Kubernetes Service and other runtime environments. Images are checked for security issues, so that you can make informed decisions about your deployments.

### Features

**Highly available and scalable private registry**  
Set up your own image namespace in a multi-tenant, highly available, scalable private registry that is hosted and managed by IBM. Securely store your private Docker images and share them with users in your IBM Cloud account.

**Image security compliance with Vulnerability Advisor**  
Benefit from the automatic scanning of images in your namespaces. Review suggestions, which are specific to your operating system, to fix potential vulnerabilities and protect your containers from being compromised.

**Quota limits for storage and pull traffic**  
Benefit from free storage and pull traffic to your private images until you reach the limit for your free quota. Set custom quota limits for the amount of storage and pull traffic per month so that you avoid exceeding your preferred payment level.

### Pricing plans

### Step 3. Download windows 64 bit installer

The screenshot shows the GitHub repository page for 'IBM-Cloud/ibm-cloud-cli-release'. The browser's address bar displays 'github.com/IBM-Cloud/ibm-cloud-cli-release/releases/'. The page header includes the repository name and a search bar. The main content area is titled 'Releases' and shows the latest release, 'v2.12.1', which was released 15 days ago by 'steveclay'. The release page lists the available installers for various operating systems and architectures, including Mac OS X 64 bit, Mac OS X M1/ARM (as-is), Windows 64 bit, Windows 32 bit, Linux 64 bit, Linux 64 bit ARM (as-is), Linux 32 bit, Power Linux 64 bit, and System/390 Linux 64 bit. The 'Binaries' section is also visible at the bottom.
